

## C5: The Emptiness Problem for Context-Free Languages

**Task:** Using the marking algorithm, check whether the following grammars generate empty languages or not:

$$\begin{aligned} \text{(a)} \quad S &\rightarrow XU \mid UW \\ U &\rightarrow SaW \mid VbU \mid SbX \\ V &\rightarrow U \mid ab \mid XW \\ W &\rightarrow bXaUb \mid VbX \mid SX \\ X &\rightarrow bV \mid WX \end{aligned}$$

$$\begin{aligned} \text{(b)} \quad S &\rightarrow AC \mid DA \\ A &\rightarrow SbC \mid BaB \mid AaD \\ B &\rightarrow A \mid ba \mid DC \\ C &\rightarrow aDbAa \mid BaD \mid SD \\ D &\rightarrow aB \mid CD \end{aligned}$$

## C6: Closure Properties of Context-Free Languages

**Task:** Show that context-free languages are closed under the reversal operation.

## C7: Construction of Pushdown Automata

**Task:** Construct a PDA that accepts the language

$$\{a^k b^l c^{k+l} \mid k, l \geq 1\}.$$
